

ANOKH KISHORE

Chicago, IL | 312-927-5917 | anokhkishore@gmail.com | linkedin.com/in/anokh-kishore-20312450

PROFESSIONAL SUMMARY

Results-driven Engineering Leader with over 15 years of experience designing, architecting, and delivering high-performance cloud infrastructure and low-latency financial systems. Proven track record of building and managing impactful cross-functional engineering teams, executing agile methodologies, and scaling enterprise-grade distributed architectures. Well experienced in recruiting, mentoring and coaching engineering talent and partnering closely with business stakeholders to drive mission-critical platforms.

LEADERSHIP AND TECHNICAL SKILLS

- **Engineering Leadership:** People Management, Team Building, Career/Talent Development, Agile Methodologies, Cross-Functional Collaboration, Mentorship, Performance Management
- **Cloud & Infrastructure:** Azure (Entra, Functions, Blob, AppService, AppInsights, Azure Batch, ADO), AWS (S3, EMR, EC2, Fargate, ECS, EKS), Docker, Kubernetes, SDN, IaaS/PaaS/SaaS
- **Languages:** C++ (C++11/14), Python 3.x, C#, Golang, Java, Shell Scripting, SQL
- **Data & Distributed Systems:** SQL Server, Apache Spark, PySpark, Apache Airflow, ZeroMQ, TCP/UDP, Kusto (KQL), CosmosDb
- **Frameworks & Tools:** .NET Core, ASP.NET, Blazor, Celery, gRPC, REST APIs, Protocol Buffers, FlatBuffers, CMake, Bazel, CI/CD (Jenkins, Bamboo), Git, Perforce

PROFESSIONAL EXPERIENCE

Capital One | *Senior Engineering Manager, Card Tech*

Feb 2026 – Present

Technologies: Golang, Java, SpringBoot, Microservices, Restate, AWS (ECS, EKS, Fargate, EC2), Splunk, Jenkins, ServiceNow

- Scaled and led a cross-functional organization of **20+ engineers and contractors across 5 distinct software and DevOps teams**
- Spearheaded the modernization of core, high-volume credit card and account microservices, successfully **migrating 20% of legacy infrastructure** to a high-performance, serverless Golang architecture. Strategically optimized distributed caching mechanisms and consolidated redundant APIs, driving a **60% reduction in recurring AWS infrastructure overhead** while maintaining seamless read/write availability for over **150M+** customers
- Architected and **modernized 15 multi-domain write APIs**, implementing the **SAGA pattern** to guarantee distributed atomicity necessary to support the **Capital One Platinum card** initiatives
- Collaborated with cross-functional stakeholders across multiple lines of business (LOBs) to successfully onboard **100+ client services** onto next-generation platforms leveraging AI tools, while establishing a phased **48-month decommissioning strategy for 70+ legacy services**
- Conceptualized and delivered an internal AI-driven platform for automatic remediation of security vulnerabilities at the org level, securing over **500+** active service repositories and **8,000+** container deployments
- **'Well-Managed'** champion across the Accounts and Transaction divisions, embedding strict clean-code architecture, secure authentication, and system design principles.

Akuna Capital LLC | Senior Software Engineer

Sep 2025 – Jan 2026

Technologies: C++, Boost, Python, Solarflare EFVI/Onload, CMake, Conan

- Led the technical design and solution architecture of an Ultra-Low Latency, High-Performance OPRA Ingestion Engine, successfully **reducing NBBO options market data gaps by 90%**.
- Optimized deterministic execution for critical market data handlers by isolating packet-reading logic using EFVI on Solarflare NIC, segregating **processing on dedicated NUMA cores**, and leveraging a custom SPMC Lock free queue
- Designed and implemented a hybrid market data recovery architecture for CME options and futures, slashing **market data/book building recovery time by >50% utilizing Natural Refresh and Recovery feeds** to accelerate exchange state synchronization.

Microsoft Corporation | Senior Software Lead / Manager – Azure Core

May 2020 – Jul 2025

Technologies: C#, .NET Core, C++14, Python, Celery, REST, gRPC, Azure (Entra, Functions, Blob, AppService, AppInsights, Azure Batch, ADO), Kusto (Data Explorer), CosmosDb, Docker, Blazor, SDN

- **Built and scaled 2 engineering teams (from 2 to 6 software engineers)**, establishing team structure, hiring processes, career development, and delivery ownership for mission-critical Azure infrastructure services.
- Led architecture and deployment of critical on-demand REST/gRPC APIs for a high-performance simulation engine for Azure WAN network modeling, **simulating millions of concurrent flows (Billions of data packets per second)** for bandwidth optimization
- **Orchestrated alignment across Traffic, Topology, Capacity, and Product Engineering domains** to define and deliver strategic deployment roadmaps for a **\$5B+ Azure Core infrastructure expansion**.
- Conceptualized and architected an asynchronous, containerized and self-healing RESTful platform for durable tasks (99.99% availability) increasing **automated cloud-scale infrastructure deployment throughput by 3x** (scaling automation of thousands of TBs of parallel deployments)
- Spearheaded multi-functional collaboration across multiple engineering teams to automate the Azure Core Infra decommission workflow, **achieving 10s of millions of dollars in annual cost savings**.
- Designed high-throughput and parallelizable Graph data models for Azure Backbone Topologies and drastically improved team engineering practices **by improving code coverage from 30% to 85% via unit/integration testing**.
- Integrated telemetry and AppInsights tracking to continuously monitor system health metrics against OKRs.

Citadel | Software Engineer - GQS

Mar 2018 – Dec 2019

Technologies: C++11/14, STL, Boost, NFS, Gtest, gRPC, HDF4, LZ4, TCP/UDP, ZeroMQ, Protobufs, FlatBuffers, Python 3.x, Pybind11, NumPy, Pandas, Matplotlib, SQL Server, MPI, SLURM

- Architected core components of a custom NFS-based Market Data platform, delivering seamless, high-performance data access to 500+ Quantitative Researchers.
- **Cut historical market data disk loading times by over 2x using reverse indices** metadata block storage and LZ4 compression. **Reduced load times an additional 30%** by introducing low-latency telemetry with ZeroMQ to trigger proactive data caching.
- Partnered directly with internal business stakeholders (QRs) to implement critical library enhancements while rigorously maintaining ABI compatibility.
- Built parallelized algorithms employing map/reduce paradigms, MPI, and SLURM for distributed computing jobs over massive internal compute clusters, **reducing historical market data aggregation by 10x**

Chicago Trading Company | Software Engineer - Risk Platform Group

Feb 2015 – Dec 2017

Technologies: C++11, Boost, STL, Informatica LBM, Python 2.x/3.x, Twisted, Autobahn WAMP, NumPy, Pandas, WebSockets, SQL

- Built ultra-low latency real-time risk computation engines to process massive market event streams, utilizing asynchronous I/O **to improve system latency and throughput by 30-40%**
- Developed a Python-based middleware layer using Twisted and WebSockets to consume multicast risk data and re-publish enriched, real-time metrics feeding UI interfaces used daily by **100+ active traders**
- Led the architecture and development of a real-time trade guardrail alerting system, successfully mitigating operational risk and preventing compliance violations for over **10B+ daily trade volume**.

Tata Consultancy Services Ltd | System and Database Application Developer

Aug 2009 – June 2012

- Created J2EE applications to run complex statistical analysis on claims data. Prepared comprehensive operational reports via Business Objects (BOXI R3) extracting from enterprise data warehouses.

EDUCATION & RESEARCH

Master of Science in Computer Science | University of Illinois at Chicago | GPA: 4.0/4.0

Bachelor of Engineering in Computer Science | Manipal Institute of Technology, India

Research Assistant (LLVM C++ Compiler Optimization) | UIC

- Developed a custom LLVM optimization pass utilizing range data from FRAMA-C to eliminate redundant checks at the IR level, reducing Load/Store instructions to improve execution performance by 30-40%.
- Enhanced Loop Deletion and Invariant Code Motion passes within the Clang compiler optimization pipeline.
